Overview

The meeting discussed the features and functionality of RDP, a customer service and training platform used by 1500 users across 100 organizations in 31 states. Key metrics include a case closure rate of around 10 hours and monthly free training sessions. The dashboard provides insights into participant engagement, active support, and progress assessments. RDP offers customizable assessments, goal planning, and detailed tracking of recovery management. Pricing is structured around a \$2,000 annual platform access fee for 10 licenses, with additional licenses costing \$200 each. The system also includes a kiosk feature for data entry, priced at \$1,500 setup and \$150 annually.

Insights

Budget

- Platform access: \$2,000 per year for ten licenses minimum.
- Additional user licenses cost \$200 per year each.
- Super admin license costs \$2,000 per year.
- Kiosk setup is a \$1,500 one-time fee, plus \$150 per year upkeep.
- Paying ahead preserves current pricing, avoiding future increases.

Authority

- Roles described: manager, regular user, super admin, coaches, administrators, volunteers as licensed users.

Need

- Concern about affordability for low-capacity nonprofits and grant-constrained organizations.
- Minimum ten-license requirement imposes cost burden on very small organizations.
- Lack of native electronic signature capture inside RDP noted as limitation.
- Support ticket closure averages affected by weekend submissions, overall average ~10 hours.

Timeline

- Typical purchase flow: buy platform access first, organizations add super admin later (often ~six months).
- Pricing is billed annually for platform and additional licenses.
- Kiosk requires initial setup payment, then annual upkeep fee.
- Organizations can prepay multi-year to lock in current pricing.

Outline

RDP Overview and Case Closure Rate

- Speaker 1 explains that they handle customer service, development, and creation, and are notified when assistance is needed.
- The case closure rate during normal business hours is quick, but the average is around 10 hours, even if a ticket is submitted on Friday night.
- RDP is used by around 1500 people, including peer service coaches, administrators, and over 100 organizations in 31 states.
- Training is available monthly, with free training on the first four Thursdays of every month, and paid training options are also available.

Dashboard and Active Support

- The homepage provides a 10,000-foot view of the organization, including the number of engaged participants and those with active support.
- Active support is defined as any interaction recorded in the last 14 days.
- Built-in assessments like the Brief Assessment of Recovery Capital and the Substance Use Recovery Evaluator are available.
- Users can build their own assessments and track goal planning and recovery management.

Coach-Focused Dashboard and Reminders

- Speaker 1 demonstrates their own dashboard as a coach, showing connected participants, assessments in progress, and recovery plans.
- Reminders and schedules are integrated into the dashboard, helping coaches track their own people.

- Speaker 2 inquires about the downloadability of data, and Speaker 1 explains that reports can be pulled from the report tab, with additional customization available through a super admin license.
- The telephone recovery support schedule allows organizations to maintain connections with participants through scheduled calls.

Program Stack and Data Sharing

- The program stack separates data based on the program the participant is assigned to, allowing for better data management.
- Smaller organizations can separate data by program, while larger organizations can restrict access to specific data based on location.
- Jason Dickerson asks about different roles and their access levels, and Speaker 1 explains the differences between manager and regular licenses.
- Manager licenses can export data to Excel and delete certain records, while regular licenses cannot export data and can only delete specific records.

Participant Records and Archiving

- Speaker 1 explains the process of discharging and re-engaging participants, showing how to update participant records.
- The ability to archive records instead of deleting them is discussed, allowing for re-engagement of participants in the future.
- Speaker 1 demonstrates how to update participant records, including demographics, support schedules, and status and involvement.
- Contacts and consents are separate records, with the ability to add electronic consents and attach files to participant records.

Supports and Services, Transportation Log, and Volunteer Log

- Supports and services include various engagements with participants, from brief interactions to attending recovery groups.
- The transportation log is important for organizations using services like Uber rides.
- The volunteer log tracks volunteer hours and contributions, which is crucial for many organizations.

- Recovery coaching sessions are detailed, including contact dates, billable units, and topics addressed.

Outcomes and Referrals, and Assessments

- Outcomes and referrals track the progress and closure of referrals, while assessments include various types of built-in assessments.
- The Gippers assessment is mentioned, with Speaker 1 explaining its removal due to changes in federal requirements.
- Program assessments can be built and customized to meet specific organizational needs.
- Group activities and attendance logs are important for tracking participation in community events and recovery groups.

Reporting and Kiosk Features

- The reporting tool allows for customized reports, with the ability to export data to Excel.
- The kiosk feature allows participants to sign up and check in using a tablet or computer, reducing data entry for staff.
- The kiosk can be used for new member sign-ups and check-ins for recovery groups, creating participant records and activity logs automatically.
- Speaker 1 explains the cost structure of the kiosk feature, including a one-time setup fee and annual maintenance fee.

Pricing and Subscription Structure

- The minimum cost for RDP is \$2,000 per year for platform access, which includes 10 standard licenses.
- Additional licenses cost \$200 per year, and the super admin license costs \$2,000 per year.
- The kiosk feature is an additional cost, with a one-time setup fee of \$1,500 and an annual maintenance fee of \$150.
- Free live training is available every month, with super admin training included in the sessions.

Final Thoughts and Questions

- Jason Dickerson asks about the possibility of using a QR code for kiosk sign-ups, and Speaker 1 confirms it is possible.
- Speaker 1 explains that RDP is built on Salesforce, using Visual Force pages and Apex classes.
- John asks about the pricing structure, and Speaker 1 explains that RDP is priced similarly to Walmart, catering to nonprofits and low-capacity organizations.
- The meeting concludes with Speaker 2 expressing appreciation for the detailed demo and the adaptability of the RDP system.

Speakers

Speaker 1 (90%), Speaker 2 (6%), Jason (4%), Speaker 3 (<1%)

It's we are not only the developers and creators and everything else, we're the customer service, so you know, clicking a little button, filling out a form, myself and a couple other of my co-workers get notified that somebody needs some assistance, and will either perform the work, close the ticket, which you will be notified of pretty quickly. Our case closure rate during normal business hours is pretty quick, but the average, even when somebody submits a ticket Friday night, we don't get till Monday, which, of course, affects our average, but our average is right around 10 hours for closing tickets. We have just around 1500 people that utilize RDP, from peer service coaches to administrators, to and over 100 organizations that are currently using RDP in 31 states. So, we've grown quite a bit since I've been in RDP. We have a manual, it's about 44 pages, if you learn that way, we also do free training, so on a monthly basis, every single month we repeat the training, but it's the first four Thursdays of every month. We basically train an hour at a time, week to week, builds on the previous week, but you know, if you hire a new employee, they can come to the next month's training, we also do do have paid training, if that's something to be interested in as well. So, the homepage is really, and this dashboard that we're looking at is kind of a 10,000 foot level of what's going on at the organization. So, how many engaged participants do you have, and how many have active support now. Granted, this is a low number, because we're in a test database, but what we consider to be active support is they've had some type of interaction with somebody at the organization that's been recorded in the last couple of

weeks, last 14 days. So it kind of tells you how active are people in your organization, how many have in progress assessments, so we have built-in assessments to RDP, like the Brief Assessment of Recovery Capital, the Shore, the Substance Use Recovery Evaluator, and a couple others. You can also build your own assessment, so if you have your own questionnaire that you need to be able to record and then report out with you, can utilize our, you can utilize that as well, and then goal planning, of course, is really important. So, how many of your participants have are engaged in goal planning, so recovery management, and then this is just looking at, you know, contact rate by month, so there's a check box on recovery coaching and telephone recovery support, which are generally scheduled sessions that did they answer the phone, did they show up, and if they didn't, they would be considered now. As you can see here, it's, you know, we're 100% on the testing base, except for, except for the December, where you probably had one that myself, so yeah, that's just a kind of a 10,000 foot level. The next tabs are all about the person who is currently logged in. So I'm the FAR manager, and I coach a bunch of people, and I am connected to 48 participants in this test database, with, you know, of those 48 people, have 35 assessments that are in progress. They have 22 recovery plans that are in progress. I have some referrals to follow up on. I have a couple of recovery coaching sessions that are coming up, as a, you know, so I know what my schedule looks like. I have some assessments that are due or past due, and I have some participants to call today, so this is my own dashboard as the coach. So one of the things we've done is try to make this as coach focused as possible, so the coach can really track and trend their own people as much as possible. And these reminders and schedule, they're in the next tab, so I know which referrals that I've given out and those that I wanted to follow up on, so I can, you know, once I either close them out, completed successfully, or abandon, they'll fall off this list. The same with recovery. Yeah, go ahead.

Sorry, can I ask? And possibly a little delayed here, as we're on the third tab, but like from the dashboard and the highlights, I mean, I assume that with how robust this is, like you, whether it's from the super admin or just, you know, in this case, like up here, whoever's using this, they could pull, is all of this like downloadable or able to be pulled in an Excel file?

So, yes, that would be on the report tab, where you're actually pulling, where you're pulling reports that we've pre-built, however, if you purchase a super admin license, that super admin license gets access to the actual reporting tool, and you're able to customize reports, so that you can look and see the data that you want to see, the timeframes that you want to see. Yeah,

awesome. Thank you.

Yeah, you're welcome. Um. Um, and yeah, so these are just reminders for the coach, you know, knowing that I have some scheduled sessions that are coming up over the next seven days, so assessments are really important for, you know, looking at recovery capital over time or looking at outcome rating scale over time, so being able to have an interval, 30 days, 60 days, 90 days, and it shows up here for the coach makes it a lot easier for them. And this is, we have a what's called the telephone recovery support schedule. Basically, people want to receive calls, so it's the organization calling the person, you know, they want to maintain that connection to the, to the center, maintain that connection to recovery. So, how many times a week do they want to be called? What days do they want to be called? And, and what time, you know, when should we call them?

Now, this is an owl, so I assume that this is.. oh gosh, speaking of omega threes, what the heck was my question? That you can't make calls in app, right? This is a separate cell phone or my desk phone. Okay, yeah,

that's right. Yep, yep, that's correct. But when I click on, when I open this person's link up, I have their, you know, phone number right here. Granted, 1111111 There's not a phone number, but you know, I have their phone number right here, and we'll, you know, I'll show you what a participant record looks like here in a second. That's the homepage, pretty straightforward for the most part. Again, 10,000 foot level for the for the org, and the coach being able to track and train their own people. The next thing, the next tab here, there's tabs across the top, here is the program stack, and really this is how data gets separated, because every single piece of data leads eventually to a program, so all data is shared based on the program that the participant is assigned to, the activity log is assigned to, so that's how program sharing works. So, when I look at a program, for instance, let's say it's a smaller organization that just needs, you know, a their overall organization with some, you know, different programs underneath it to be able to separate out

data,

so this is, you know, activating all licenses in the upper level program, but you know, like, you know, or a U RDP 2.0 so that's like a funding stream, so I can say, hey, this person is part of this program, so when I pull data, I can say I only want to see participants that are assigned to this program,

that's smart, yeah, that's great.

And then, if you're a larger organization and need, you know, you have different locations for whatever reason, then we can start not only, of course, separating data based off the center, but restricting access, so I could activate a license in center number two, and they would have access to be able to view, create, edit data in center number two, funder three,

funder four, but they wouldn't have access to any of the other programs, so it's a way to control access to data as well, if that's needed. Yeah,

so we have different roles that can separate that out, you being the test database and a super admin, let's just say you can see all these programs, but if I was in that little program, I logged in, I would only see my data, right,

that's that's correct, yeah, in this, in this organizational, so yeah, profiles, so I'm logged in into the normal, this isn't a super admin, this is a manager level license, there's a regular, there's a regular license. The difference between the two is the biggest difference is when I run a report, and I'll just run a simple report here. My referral works when I run a report as a manager, I can export these details, so I could export this all of this information to a report in Excel. Regular licenses do not have these two buttons, they can't take the data outside of RDP, so it maintains itself in a HIPAA compliant environment. That's a big difference. The other difference is manager level licenses can delete records, certain records, not all records, but they can delete most records, and that you will see, you know, when I start looking at, so as a manager, I can delete this person record. So, when I delete, granted, I don't have a name, but when I delete this person, not only does it delete the person record, but any child record underneath it, and I'll kind of explain what I mean by

since

you've brought that up, is there ability to archive that versus delete it? Let's say that I deleted somebody out of the program or archived somebody, yeah, and they're gone, and in three months they come back into my program, and I want to kind of pick up that data, so where they left off, so there's the ability to archive the students, right,

that. Right, so how it works, and how it works in RDP is a regular, and I'll open these two, so you can see that here.

So, on this,

no, no, it's I like rabbit holes. So, on this on this participant record, you can see that this person is this person is currently engaged, and when you're engaged, you have a discharge button. So, what that does is it allows you to, when I click that button, it's going to allow me to discharge. Is the only term, just like intake is the only term that we could, you know, we tried to come up with different words, and it just didn't make any sense. So, when I discharge this person, it takes me through a step process to actually put an end date, so you can see, like, how long their engagement was until they left for whatever reason. Now, if I discharge Lance, eventually, once I get done with the process, they're going to be in what's called a no longer engage state, so, and the difference is you can see here is, you know, this person still has highlights, I can still add records, whereas on this person, who is no longer

engaged, they don't have highlights, I can't add additional records to them, but I can re-engage them, so that that, and that's why we kind of designed this way, so you could actually see somebody who comes in, does work for a little bit with a coach, and then stops coming in for whatever reason, they get discharged three months later, they come back in, so you can see that flow of recovery for individuals, if that's something that we needed to do, so I could re-engage this person and do a whole no new, but you know their record is still here. I'm just updating where they're at today. Yeah, all right. So, let me find my.. I usually, Lucy's my Lucy White. I've been working with for a long time, and I know how long I've been working with, because RDP tells me that I've been working with her for 112 169 days, so basically since RDP, since this version of RDP, RDP has been around since 2017 but this version of RDP, RDP developed and soft released in December of 22 and we started bringing people onto the platform in January of 23 but this kind of gives me a, you know, this gives me a, you know, her name, where she lives, her phone number, she has an email, I can edit Lucy's record, so I can update it if something, you know, changes with, with her, if needed, but, you know, I know what her demographics are, what her support schedule is, and then we have this, what's called status and involvement, so it's a way to, so this is a quick view, so I know that go ahead,

I just was saying, I love the dashboards,

oh yeah, well, it's, it's, we try to make it as visual as possible, and to have quick views, so I know that, hey, Lucy has children, she's currently pregnant, she's unhoused, you know, things of that nature, and those all come from, and of course, yes, I can, you know, I have that, you know, bark graph, so I can see her recovery capital for time, but the first record that you can, the status and involvement is a way to track and trend people's life changes, from employment and housing to their Sud history, to, you know, their family status, their, you know, marital status, their legal, criminal status, things, every pretty much everything that you can think of, education, you can track and trend, and what I mean by that is, like Lucy started working with me back in, you know, November of 22 you know, she was living in a shelter, and then, you know, she became unhoused on december 1, she was still unhoused on December, or, you know, and it continues on in her current state as of 415 2024 I've started, stopped updating Person's record on a regular basis, but so she's unhoused, she's working not enrolled in school, so that's her current status, but I can see all of the other, you know, kind of progress or decline that she's been, you know, as a coach can be very helpful. Contacts and consents are different records, again from their contact information to emergency contact information, other contact information, whatever those might be. And then consents for program, and consents for program is so it's using you can add your own consents now. Can they sign inside of RDP? Unfortunately, they can't, and I don't. I've tried, I've tried looking if it's possible, and currently it's not. But you can, you

know, have a verbal electronic, so it's a way to at least report out that somebody. That there isn't possibly an electronic copy on file of them agreement to receive services, so this is just a, you know, a boilerplate kind of a thing, but this section right here is something that you create yourself for use. Now, the cool thing is, if you have an agreement to research receive services and you have your own process to have them sign a piece of paper, you can scan that piece of paper, and on their intake record, you can attach any and all files that you need to to their person, keeps it in a HIPAA plan environment, can attach as many files as you want to, they just have to be less than 25 megabytes, that's that's the only, the only requirement. So it really makes it a lot easier to do that. Now we do have additional resources if you decide to purchase something like that, where we have electronic signature capture creates PDF of release of information, agreement to receive services, all those kind of things that may be needed. Supports and services are just that, they're all the different engagements that you might might have with somebody, from a brief interaction to them attending a recovery group, or maybe just a community event, recovery coaching, which I'll show you, what that looks like, supplies, materials, and goods. So we, we really kind of updated, and it's a robust way to show what you all are providing to your community through goods and service goods, mostly from clothing to food to harm reduction supplies, to you know, whatever, whatever you all are giving away. The cool thing is, we've created a process that you're able to make your own lists, so instead of having to, somebody having to type in what they gave out to this participant, they can just select it from a drop down, makes it a lot easier that way. Transportation log can be very important, depending on the organization. Yeah, go ahead.

I was just saying, ooh, to the transportation log, that's.. I mean, that's great.

Yeah, we have organizations that utilize that for Uber rides that they give people, that they..
yeah, yeah.

And, of

course, the volunteer log is really important for a lot of organizations as well.

That's cool.

So recovery coaching is, you know, pretty straightforward. You know, contact dates, what did they show up? So did Lucy show up? If she didn't, when I clicked this button, could see pretty much everything go away, except for what time was she's supposed to show up. Why did she not come in? Any other comments, but I can still schedule a next session date and time. And then, you know, you know, start and end time type of contact is this billable. So we have some calculations in the background that do the 15 minute billable units, things of that nature, so, and you know what supports what topics did you address? Any other

comments? Did you make a referral? Did you want to track that referral? Did you address any recovery domains? So, just did you distribute any materials? So, all the just a lot of, a lot of stuff. So, that's important services, and then outcomes and referrals are just that, are you know, the referral comes from a support and service, so I'm able to track and trend and close out those referrals if I need to, and then the assessments are just that is, you know, all the different types of assessments that we have built in to RDP. The Gippers going away because they went to the super or something like that, so it's one thing that we're, we're getting rid of, but it's, you know, as simple as

I asked John, what do you buy by that,

so the horrible release by the federal government back in October, they change, they changed what recovery support services are required to submit back in October of 25 so recovery support services were supposed to be doing gippers, which we have complained about from a long time ago, because it's a very clinical document, so they changed it to, I think, it's called the Super SCP RT, I believe, and which is more in line with peer recovery support services, but their release of it was, yeah, it wasn't very good. Anyway,

I mean, it is federal government, so yeah,

so yeah, so and then the program assessments are the ones that you can. Build, so for instance, like we, and of course, we help you do it, because it can be a little complicated, depending what you're looking at, but like the recovery capital data, 35 so this is the longer recovery capital data, so this allows you to have longer assessments, but it still works the same way with being able to schedule every number of days, things of that nature. So this is kind of your own, your own thing, and the way, so you know, you can see somebody's brief assessment of recovery capital over time as a coach that can be very, and of course do some data analysis on the back end reporting, so that's all the stuff you can, you can put on one person, and of course you know there are groups activities, and group activities are really important for recovery community organizations, and that's what activity logs are, so being able to record, you know, a smart recovery group that has, you know, 14 attendees, things of that nature. However, so this is the general discount. If you really want to get into the weeds and know and say who actually went to, you can do that. Add an attendance, so if I know Lucy went to this activity, I can add that attendance. I can look her up. Granted, it didn't think it showed you, because I'm just, but there was a lookup window that popped up. It automatically puts the date of the activity, the start and end time, which I can adjust any other comments, and then I can add more if I want to. And then, once I'm done, I click save, and Lucy is now in attending for this to this activity, and it's also on her person record from five four. So, when I go down to here on five four, she attended a group, and through reporting, of course, you can do all that stuff. There's a force the reporting tool, so the

reports that are here are for all organizations in RDP. They're all generalized reports. If you don't have a super admin license, you can always say, "Hey, I have this field, I can't find it on any report, and if we can't find it either, then we'll add it to a report that makes sense. But for instance, you know, if I scroll down to the people reports, the people demographics, so I'm able to look at every single person that has ever been created in your organization in RDP 2.0 I can sort on created dates, I can sort on date of birth, I can sort on any column, and I can export these details to use Excel to do all the filtering and counting, and or if you have a super admin license, you'll have a customized button, so it's a customized button that can say I only look at people that created last month, or I only want to look at gender, actually summarize on gender to count every day binary. so being able to do that kind of thing makes it a lot easier with reporting. Yeah, the only other thing I want to show you is we do have a what's called the kiosk, and again, this is, you know, an additional cost, but for organizations that want to kind of alleviate some of the data entry on their end, the participants actually utilize it, so you know they have their own branded kiosk on a tablet or a computer at the front desk, multiple tablets, like my old organization in Portland, Maine has, shall we say, a lot of it's Portland, Maine's a crazy recovery community, you know. They probably have 4000 visits a month somewhere in that. Yeah, it's if you, you can pretty much go to, I don't know, 10 recovery meetings in Portland, Maine, every single day, if you want, and so the, like, you know, my, my old org has, I think, three tablets or so, where you know people can become a new member, so they put, they, they actually use this, put their name, their phone, their email, you know, all of this kind of stuff, and then once they filled it out, they click submit, and it, and it creates a participant record in RDP 2.0 in that program, and there's also a check-in kiosk, so basically somebody can, you know, when they walk into the door, like, here I'm checking in, I'm a member, here's my shortcode, which this one's based on their name and birth dates, but we also have the process for an email or a phone number, something that's a unique identifier for a person. And then I'm coming here for a recovery group, and I'm coming here group one would be Smart Recovery. So, when I click submit on this, it's going to create that Smart Recovery activity log and an attendance record based on their purchase. Shortcomb, so it basically takes that data entry off of SAP, which can be very helpful. Yeah, that's all I got. Yeah,

you know your stuff. That was very thorough.

I do. I've been, I've been utilizing RDP since November of 2019 So, yeah, it's awesome.

It's the second I have. I have. Yes. So, any questions?

Well, I'm trying to think if there's anything major on the kiosk part. Do you guys have an option to let's say I'm walking in, scan a QR code, and I want to sign up. Yeah, do you have a web app as well? That's

so.. that would be.. yeah, so the QR code would be something on your end where somebody would scan a QR code, and then that kiosk page would pop up. That's right, that's it. It's just a website, it's a website that we build and update for you as we go along, so if you need changes to it, things of that nature. Yep,

I think it's like it's great. I mean, it's very user friendly. Looks like you guys, is it built on what's your, what's your, a little bit of your back end?

It's built on it's, it's built on Salesforce.

Okay, yeah,

yeah. No, it doesn't look anything like Salesforce, because we use Visual Force pages and Apex class and all kinds of other different things, but yeah, it's it's built on Salesforce, really.

We also, so face invoices also has a total, so our internal instances in Salesforce as well, which looks like Sales for our customer relations.

John, I have a question. I mean, it's, you know, it's always my question, and things like this, because we live in an increasingly expensive world, especially for low-capacity nonprofits and community providers. What does.. I mean, to the extent, I guess you can talk about this. What is a pricing structure look like?

What I will say, and I always preface this, is we are Walmart electronic recovery records. So, for that's that's how I look at, because, because I know some of the prices of the other, other words,

yeah,

do something like this. So, we're nonprofit, we cater to nonprofits, we, we try to maintain our prices as reasonable as possible, so for the minimum cost of RDP is to purchase platform access, and that platform access gives you 10 standard licenses, either manager or regular. You could have 10 manager licenses if you want 10 regular licenses. It doesn't matter to

us,

so those that platform access is \$2,000 per year, 10 individuals to be able to log into RDP, edit, view, create, report, all that kind of stuff. Additional licenses, if you had more than a

staff of 10 or needed more than 10 licenses, we would just charge you for those individual ones after that. So, if you needed 13 licenses, then you would be charged for 13. It's a, it's an annual subscription, so basically it's \$2,000 per year for the platform access, and then \$200 per year for additional licenses on top of that, the super admin license, which is that reporting, being able to create your own reports, and you're also able to create reports for your staff, for them to be able to look at data differently as well, so that one license, because it does log into the back end, is \$2,000 per year for that one license. Usually, what I see happen is, you know, they'll do the platform access, and then about six months later they have so much data, and they're tired of using Excel. They'll get the super asset not every time, but the kiosk is a one-time fee of \$1,500 and then there's \$150 fee for the upkeep and the data associated,

\$150

per year, yeah, but it's just a one-time fee for us to set it up,

and

then what else do, like I said, we do free live training every single month, it's basically four hours of free live training, and then there the training is actually an hour and a half, the first hour is for standard license. The last half hour is for super habit. So we do super habit training

to

minimum access license, so so it's 10 licenses, manager regular, \$2,000 a year. An additional license is, is basically any, it's still for obviously. Annual subscription, but it's \$200 per year for each additional license. So, are you aren't necessarily like, say, I'm a, you know, recovery home with, and I need, you know, on any given day, like, I need, like, 100 licenses. So, would I
